DETAILED ACTION

1. Acknowledgment is made of applicant's preliminary amendment which was received by the Office on March 11, 2002. This document has been made of record in the file as Paper No.6.
2. Claims 1-27 are active and pending.

Priority

3. Acknowledgment is made of applicant's claim for priority as a national stage 371 application as disclosed in the applicant's pre-amendment (Paper No.6) to PCT/US00/00544, filed January 10, 2000, and to priority filing based upon applicant's own U.S Patents 6,014,588 (filed April 7, 1998) and 6,314,325 (filed June 18, 1999).

Oath/Declaration

4. Acknowledgment is made of the receipt of applicant's new declaration, which was received by the Office on March 11, 2002. This paper has been filed in the case as Paper No.4.

Drawings

5. Applicant's formal drawings were received by the Office on March 11, 2002 and have been approved by both the Draftsperson and the Examiner.

Double Patenting

Art Unit: 3762

6. Claims 1-3 and 8-12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 and 4-8, respectively, of U.S. Patent No. 6,314,325-B1. Although the conflicting claims are not identical, they are not patentably distinct from each other because all features recited by the applicant's claims are set forth in those of the '325-B1 patent. In fact claims 2, 3, and 7-12 were copied verbatim.

7. Claims 8-10 and 12 are also rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 3-5 and 7, respectively of U.S. Patent No. 6,014,588. Although the conflicting claims are not identical, they are not patentably distinct from each other because all of the method steps broadly recited by the applicant's claims are more specifically set forth in the '588 patent. Claims 9 and 10 appear to have been copied verbatim.

Allowable Subject Matter

8. Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9. Claims 13-27 are allowed.

10. The following is a statement of reasons for the indication of allowable subject matter:

Independent claim 13 recites the details of an apparatus for relieving pain having a controller which generates a series of positive electrical pulses of “sufficient electrical intensity to cause hyperpolarization of the nerve”, yet not strong enough to affect the spinal cord. The Examiner could not find this and other of applicant’s claimed features in the prior art..

Independent claims 14 and 25 recite methods for treating pain and vascular disorders using a neural stimulator by performing the unique steps of placing one of the stimulator’s positive electrodes near a patient’s peripheral or sciatic nerve and placing the stimulator’s negative electrode at a separate remote region of low sensitivity (i.e. among adipose tissue) some distance away from the positive electrode. Although the concept of treating pain using electrical stimulation of the sciatic nerve is old and well known in the art (e.g. Avery et al ‘368), none of the prior art references teaches separating the negative electrode from the positive in the manner claimed by the applicant. On the contrary, the prior art teaches the use of multipolar leads whose positive and negative electrodes appear to be co-located on the same leads (e.g. King ‘331 and Weiner ‘075-B1). It is also unclear from the prior art references whether or not the energy delivered by their stimulating devices is adequate to hyperpolarize the peripheral or sciatic nerves, as claimed by the applicant. In view of these shortcomings, the Examiner deems independent claims 14 and 25, and their depending claims to be allowable over the prior art of record.

Conclusion

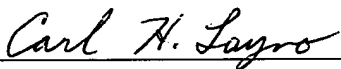

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The Feler et al '964 and Alo et al '957 patents are cited for their pertinent teachings regarding nerve root stimulators. Unfortunately, these references could not be used due to their defective filing dates.
